

# Implantology

## WHAT IS IT?

Implantology is the area of intervention dedicated to the placement of dental implants. Implants are manufactured in a titanium or ceramic alloy and placed in the maxilla or mandible, to support the new ceramic crowns, bridges or fixed full-arch prosthesis. They replace the roots of missing or clinically lost teeth.

### What are the 4 stages of treatment?

#### 1. PLANNING

Case study with clinical exam and complementary diagnostic tests.

#### 2. SURGERY

Placing the implants.

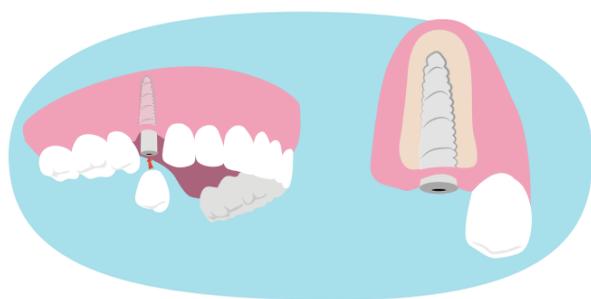

#### 3. RESTORATION

Clinical procedures for the construction of the prosthesis to be placed on the implants.

#### 4. MAINTENANCE

Hygiene and maintenance appointments that allow everything that has been done so far to remain healthy throughout life.

### Three cases of implants placement:

Single implant

Bridge on implants

Complete prosthesis on implants

### What are the main advantages?

Placing an implant is a **definitive and complete solution to the problem of missing teeth**, returning a natural tooth's function, comfort and aesthetics, with significant impact on **quality of life and physical and emotional health**.

### Who can place a dental implant?

Dental implants are recommended for people **over 18 years of age**, when bone growth is completed and if there are no other diseases that may contraindicate it.

### Is it a painful treatment?

No, this surgery is a **painless procedure** with local anaesthesia, the same used in any other dental treatment. You can resume your normal life in moderation on the next day.

### Why should you choose Clínica Médicis?

- **Reliable medical team** with professionals dedicated to the practice of Implantology who will find the most adequate solution for your case.
- Performance of complementary diagnostic tests, such as **CBCT**. This imaging exam makes it possible to capture 3D images key for the visualization of specificities of the patient's structures.
